

Child Sickness Protocol

If a child becomes unwell during the school day:

Staff protocol

- Adult who will deal with child to put on appropriate PPE
- Child taken by adult immediately from their class group to the dedicated medical room (which is music room) and school office informed.
- If child has expelled any bodily fluids, such as vomit, all other members of the bubble to be removed to a safe area
- Inform school office if there are any cleaning requirements in the classroom/ toilets. Follow guidance for cleaning
<https://www.gov.uk/government/publications/covid-19-decontamination-in-non-healthcare-settings/covid-19-decontamination-in-non-healthcare-settings>
- Medical room windows open and door closed
- Disabled toilet used if child needs to go to the toilet while waiting to be collected- signage to put room out of use until cleaning occurs; office to be informed immediately if toilet has been used so cleaning can be arranged- appropriate PPE to be used when cleaning after suspected case (full face shield etc)
- School office to inform parents to collect child immediately- give parent guidance sheet of 'parent protocol' when they pick up their child
- Everyone must wash their hands thoroughly for 20 seconds with soap and running water or use hand sanitiser after any contact with someone who is unwell. They do not need to go home.
- The area around the person with symptoms must be cleaned with normal household cleaning products after they have left to reduce the risk of passing the infection on to other people.
- Following advice from local health protection team, a letter will be sent to parents of children who have been in 'close contact' with the child within the school environment who has presented with symptoms/ received a positive result to inform them of any further action required
- Staff and pupils who have been in 'close contact' with the child who has presented with symptoms/ received a positive test result will only be sent

home to self-isolate following instruction from the local health protection team

- In an emergency, call 999 if they are seriously ill or injured or their life is at risk

School Protocol further advice:

<https://www.gov.uk/government/publications/actions-for-schools-during-the-coronavirus-outbreak/guidance-for-full-opening-schools>

Schools should ask parents and staff to inform them immediately of the results of a test:

- if someone tests negative, if they feel well and no longer have symptoms similar to coronavirus (COVID-19), they can stop self-isolating. They could still have another virus, such as a cold or flu - in which case it is still best to avoid contact with other people until they are better. Other members of their household can stop self-isolating.
- if someone tests positive, they should follow the '[stay at home: guidance for households with possible or confirmed coronavirus \(COVID-19\) infection](#)' and must continue to self-isolate for at least 10 days from the onset of their symptoms and then return to school only if they do not have symptoms other than cough or loss of sense of smell/taste. This is because a cough or anosmia can last for several weeks once the infection has gone. The 10-day period starts from the day when they first became ill. If they still have a high temperature, they should keep self-isolating until their temperature returns to normal. Other members of their household should continue self-isolating for the full 14 days.

Manage confirmed cases of coronavirus (COVID-19) amongst the school community

Schools must take swift action when they become aware that someone who has attended has tested positive for coronavirus (COVID-19). Schools should contact the local health protection team. This team will also contact schools directly if they become aware that someone who has tested positive for coronavirus (COVID-19) attended the school - as identified by NHS Test and Trace.

The health protection team will carry out a rapid risk assessment to confirm who has been in close contact with the person during the period that they were infectious, and ensure they are asked to self-isolate.

The health protection team will work with schools in this situation to guide them through the actions they need to take. Based on the advice from the health protection team, schools must send home those people who have been in close contact with the person who has tested positive, advising them to self-isolate for 14 days since they were last in close contact with that person when they were infectious. Close contact means:

- direct close contacts - face to face contact with an infected individual for any length of time, within 1 metre, including being coughed on, a face to face conversation, or unprotected physical contact (skin-to-skin)
- proximity contacts - extended close contact (within 1 to 2 metres for more than 15 minutes) with an infected individual
- travelling in a small vehicle, like a car, with an infected person

The health protection team will provide definitive advice on who must be sent home. To support them in doing so, we recommend schools keep a record of pupils and staff in each group, and any close contact that takes place between children and staff in different groups.

A template letter will be provided to schools, on the advice of the health protection team, to send to parents and staff if needed. Schools must not share the names or details of people with coronavirus (COVID-19) unless essential to protect others.

Household members of those contacts who are sent home do not need to self-isolate themselves unless the child, young person or staff member who is self-isolating subsequently develops symptoms. If someone in a class or group that has been asked to self-isolate develops symptoms themselves within their 14-day isolation period they should follow ['stay at home: guidance for households with possible or confirmed coronavirus \(COVID-19\) infection'](#). They should get a test, and:

- if the test delivers a negative result, they must remain in isolation for the remainder of the 14-day isolation period. This is because they could still develop the coronavirus (COVID-19) within the remaining days.
- if the test result is positive, they should inform their setting immediately, and should isolate for at least 10 days from the onset of their symptoms (which could mean the self-isolation ends before or after the original 14-day isolation period). Their household should self-isolate for at least 14 days from when the symptomatic person first had symptoms, following ['stay at home: guidance for households with possible or confirmed coronavirus \(COVID-19\) infection'](#)

Schools should not request evidence of negative test results or other medical evidence before admitting children or welcoming them back after a period of self-isolation.

9. Contain any outbreak by following local health protection team advice

If schools have two or more confirmed cases within 14 days, or an overall rise in sickness absence where coronavirus (COVID-19) is suspected, they may have an outbreak, and must continue to work with their local health protection team who will be able to advise if additional action is required.

In some cases, health protection teams may recommend that a larger number of other pupils self-isolate at home as a precautionary measure - perhaps the whole site or year group. If schools are implementing controls from this list, addressing the risks they have identified and therefore reducing transmission risks, whole school closure based on cases within the school will not generally be necessary, and should not be considered except on the advice of health protection teams.

In consultation with the local Director of Public Health, where an outbreak in a school is confirmed, a mobile testing unit may be dispatched to test others who may have been in contact with the person who has tested positive. Testing will first focus on the person's class, followed by their year group, then the whole school if necessary, in line with routine public health outbreak control practice.
